

BITNINJA

SERVER SECURITY

CASE STUDY

Aitire

<http://www.aitire.es/>

The Company

Aitire is a small MSP (Managed Service Provider) company located in Spain. They have more than 10 years of experience in computer consulting, Free Software, Open Source, GNU / Linux, etc... They aspire every day to maximize their technology and provide the best tools to their clients.

Challenges

„We usually work with rpm based linux distributions and we used to face a lot of problems on them. Before using BitNinja we experienced a huge amount of attacks, mostly DDoS.”

- Alejandro Escobar

As many others, Aitire also tried different kinds of solutions against the cybercrimes.

„We reached only a relative success with CSF and CXS, so we wanted to find something better than the common CDN solutions.”

- Alejandro Escobar

Solution

„We started to searching on the Internet for the best solution for our problem and then came BitNinja.”

- Alejandro Escobar

The efficient protection that they could experience thanks to BitNinja was so convincing, that they decided to become our reseller partner after 2 months.

„BitNinja is an all-in-one solution, which makes redundant all the previous security software what we were using before. I think all the hosting companies dreaming about to protect their servers with only one complex, easy-to-use server security tool.”

- Alejandro Escobar

The efficient protection that they could experience thanks to BitNinja was so convincing, that they decided to become our reseller partner after 2 months.

„I really like the Honeypots. I believe this is the greatest discovery of BitNinja.”

- Alejandro Escobar

Results

„Just to mention the key results: since we are using BitNinja the CPU load was dramatically decreased and the DDoS has gone!”

- Alejandro Escobar
